

The place I imagine is a city.

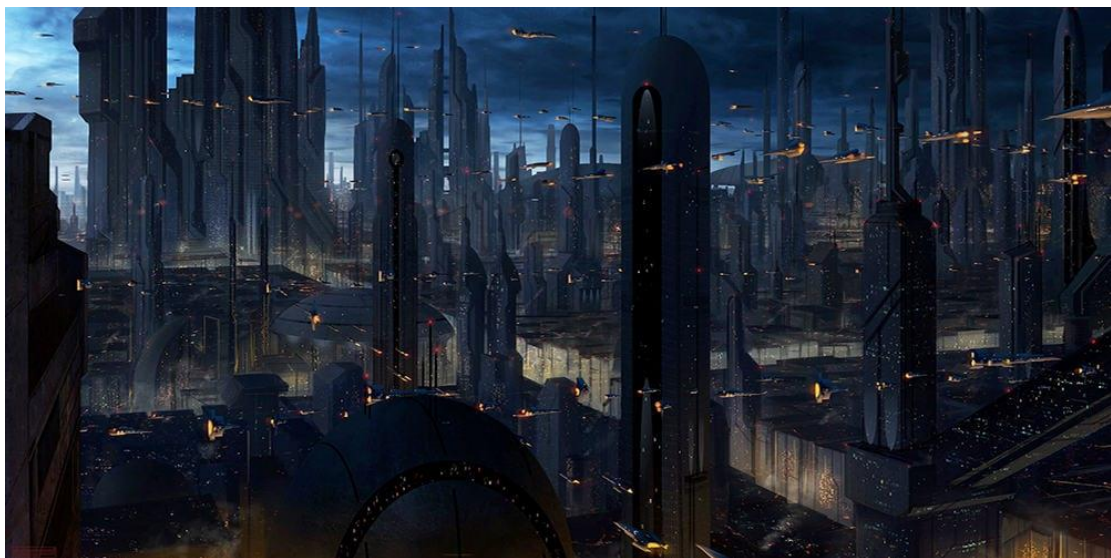

Colors: Mercedes Benz F1 racecar, MacBook, Metal, Iron Man Mark II, Medal for second place

Smells: The new car, New building

Sounds: Electric car, Metro, Machine

Sensations: Future, New, Crowded

This landscape I choose is my image for the future city. The city is filled with skyscrapers and flying cars, and all of the citizens live in the towers. Many of the workers in the city are robots, and people in the city live the life just like one of the planet in the movie Star Wars. The citizens all travel by flying cars and buses in the city, and this is the way to solve the problem of traffic jam. Because the city is filled with skyscrapers, the population will increase. The floating cars give the city a better capacity for transportation. On the other hand, because all the cars and buses are powered by electric, the air quality in the city becomes a lot better. While the city is filled with buildings, the city has the problem of lacking natural area.. As for me, I will take the role of designing the transportation routes in the city. Because I major in transportation, I will solve the problem of traffic jam in the air, and find the best solution to give the city the maximum capacity of cars in the air. I will also design the natural places for the city, as all the cars are floating in the air, the spaces used to be road for cars can plant trees, which helps the city become a better place for people to live in. I hope my image for the future will come true one day, and I will play an important role in the design of the city.

My image for the future city(From Star Wars planet Coruscant)
