

Montse's wishlist 2072

- How can we study and write about desire?
- How is desire connected to the political potential of social (re)production?
- How is desire linked to social action and political transformation (or maintenance)?
- How does knowledge relate to desire?
- How does knowledge production relate to the formation of ethical-political relations between people and the world?
- How do food practices relate to desire? (from production to consumption, and waste)
- How does the way that people relate to food affect the way they understand and act on their worlds, bodies, practices, and wellbeing?
- How is food/eating connected to knowledge production in different settings and social relations?
- How does everyday food practices relate to the formation, maintenance, and transformation of ethical-political relations between people, institutions, and more-than-humans?
- How to research power – make critique- without reifying possibilities of the future?
- How can we analyze different temporalities (past/present/future) and spatial relationships while attending to the urgency of action in the present?
- Political potential, desire, imagination, and capitalism
- Labor and consumption
- Food practices (from production to waste) in socio-ecological assemblages
- Material semiotic practices of food/eating
- Infrastructures and sociotechnical relations in food transformation/circulation/consumption
- Society-nature relations in capitalism
- How does knowledge about nature translates to different forms of value production?
- How is knowledge related to the production of value?
- How can food be a commodity, and how does its commodification shape ethical-political relationships about eating/food?
- How do people in positions of power (in corporations, institutions, etc.) imagine the socio-ecological crisis and their role in it?
- Supply chains – commodities
- Mexico
- Colombia
- Netherlands
- Places where I can communicate with Spanish or English (this could be broaden if I learn a new language in this 50 years).
- Interdisciplinary research
- How can we facilitate collaborative work with different disciplines/knowledge(s)?
- How can we incorporate lessons from restorative justice in our work?
- What forms of responsibility emerge in the context of agro-industrial food supply chains in the context of the Anthropocene?
- How to make response-able research?
